## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 2000-226572 (herein after JP 572).

JP 572 discloses a technique wherein a porous silica having a surfactant micelle as a matrix is made to support a functional molecule, characterized in that the aforementioned surfactant is not removed, and the hydrophobic portion of the aforementioned surfactant is used (see especially paragraph [0019]). JP 572 discloses using the mesopores of a porous silica having a surfactant micelle as a matrix and both address the common problem of maintaining the stability of the mesopores. The spiropyran compound is contained in these mesopores. The orientation of the spiropyran compound inside the micropores is yet to be clearly understood, but the spiropyran compound seems to be adsorbed on the walls of mesopores (nanochannel) as shown in Fig. 2(a) when the surfactant is completely removed, while seems to be present in the hydrophobic regions of the surfactants as shown in Fig. 2(b) when the surfactants are present (paragraph 19).

***Response to Arguments***

Applicant's arguments filed 10/2/08 have been fully considered but they are not persuasive. Applicant argues, "However, JP'572 does not disclose or suggest the inner wall of the nanochannel being subjected to a hydrophobic treatment, and being hydrophobic. Accordingly, all of the features of claims 1 and 9 are not disclosed or suggested by JP'572." Jp '572 recites, "The spiropyran compound is contained in these mesopores. The orientation of the spiropyran compound inside the micropores is yet to be clearly understood, but the spiropyran compound seems to be adsorbed on the walls of mesopores (nanochannel) as shown in Fig. 2(a) when the surfactant is completely removed, while seems to be present in the hydrophobic regions of the surfactants as shown in Fig. 2(b) when the surfactants are present (paragraph 19)." The Examiner maintains that the mesopores are hydrophobic as recited in paragraph 19.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
